M

**OFF-HIGHWAY
TRUCKS AND TRACTORS**

**FOR EARTH MOVING, MINING
QUARRYING AND CONSTRUCTION**

Pioneer builder of off-highway motor trucks

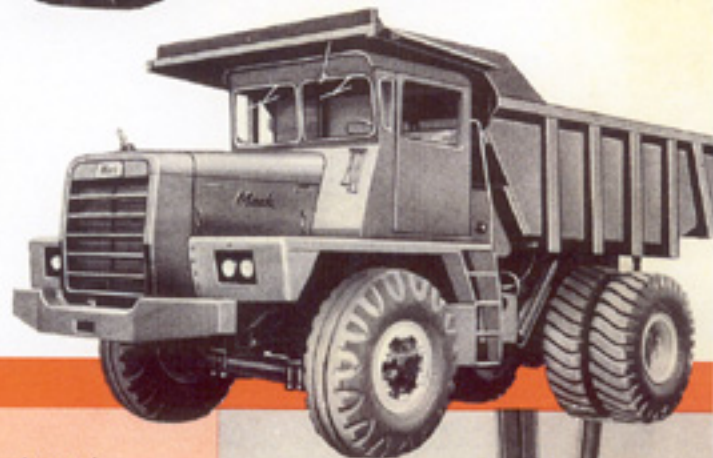

MACK offers a comprehensive selection of vehicles for huge loads on difficult terrain. For 30 years these have shown unequalled performance, endurance and dependability in every quarter of the globe.

Original and exclusive engineering coupled with complete manufacture in Mack's great shops assures balanced design and precision production.

MODERN IN DESIGN, the new, bold lines of the Mack six-wheeled Model (shown above) mark it as a truly functional heavy-duty dumper for the mining and quarrying industries where huge loads are commonplace.

Two-axle trucks are available in capacities ranging from 15 to 30 tons. At right is illustrated the Mack M-30X.

Adequate cooling under the most rugged and adverse operating conditions is effected by giant continuous-finned flat-tube type radiators with frontal areas up to 2330 square inches.

Driver comfort is assured by convenient arrangement of controls and instruments, as well as adequate ventilation in this roomy cab offset to the left, thereby providing excellent vision both fore and aft and to the sides.
