Transmissions Matched with the mighty diesel, Mack transmissions furnish the pull and speed required on today's high speed highways. These transmissions offer a wide selection of ratios for any road condition.

TR67 ... This 5-speed transmission is principally for city and suburban delivery with 2-speed rear axles for highway service. All Mack transmissions have integral main and compound cases, making them light, short, and easier to maintain.

TR107 ... Complementing the Maxidyne engine, this five-speed transmission, with evenly spaced steps, takes full advantage of the horsepower and torque delivered to it. Together, this pair provides maximum usable power with less shifting.

TR0722 ... This transmission is a ten-speed with a direct in the top speed. Suitable for heavier highway gross weights as associated with Mack chassis. A transmission that will operate smoothly without vibration under peak demands.
