G90: a profitable lightweight

• A truck for you

In these cost-conscious times, the G90 is easy to operate. Its design makes it ideal for the distribution role: manoeuvring in and out of towns, streets and traffic; around loading bays, factories, courtyards and foreyards. Its compact dimensions and low cab profile make it unobtrusive in any situation.

• Reliable

The number one reputation for any truck is reliability. G90's ECD engine has proven itself reliable, durable and economical at both 7.5 and 10 tonnes, and will keep on working day after day, month after month, mile after mile..... at the lowest possible cost.

• Performance

At 145 bhp, the G90's 7 litre, 6 cylinder ECD engine provides more power and torque than many other trucks in its class.

It's forgiving too - high torque levels across a wide engine speed band make the G90 flexible and responsive for any driver.

Economy Area (pm) Peak Economy (pm)

7-litre	1100 - 2200	1100 - 1400
---------	-------------	-------------

• Practical

The G90 range offers a host of practical features. 24 volt electrics help the truck to start first time, every time. Large capacity fuel tanks mean greater range and journey flexibility. Modern low profile tyres provide better ride and handling, extra performance and lower running costs. And full air brakes on both axles insure total braking confidence. Options such as ABS brakes and a crawler package increase the G90's versatility.

• Aerodynamic

G90 is streamlined for aerodynamic efficiency and fuel economy. And for even greater savings, a range of purpose-designed air management kits is available to suit the majority of body applications.

• **Easy to drive**

Light power steering and a superb car-like gearchange make the G90 easy to drive. And, easy to drive safely, thanks to large, nested rear view mirrors, a deep panoramic front windscreen, and rear cab window. It's manoeuvrable too, with 4.1 turns lock to lock, and a turning circle comparable to many smaller vehicles.

• **Ease of access**

Getting in and out of the G90's 3 man cab is simple, thanks to the low mounted anti-slip steps. A flat floor makes cross cab access easy too, so important in ensuring driver safety and convenience in urban operations.

• **Comfortable**

G90's light, spacious and comfortable interior make it a pleasant place for any driver to work: easy reach controls, well laid-out instruments, everything where it should be. A fully adjustable driver's seat provides the ideal driving position.

• **Secure**

The cab's steel construction provides all-round protection for the driver and crew. And the standard fitting of seat belts and head restraints provides the optimum level of safety.

• **Corrosion protection**

Extensive use is made of non-corrosive plastics for long life and low weight. And a 5 year, unlimited mileage, anti-corrosion cab warranty gives extra peace of mind.

G90: a serious lightweight

• Built for any job

7.5 or 10 tonnes, the G90 is ideal for all load applications. With an unladen weight amongst the best in its class and generous axle spacings, there's minimal danger of axle overloading, even with front-mounted equipment or diminishing loads. G90 can offer significant additional carrying capacity over some competitive models.

• Intelligent design

G90's high tensile steel chassis frame is cold rolled and straight from front to rear for total strength. It has a completely flat top and is supplied with mounting brackets to make bodying quick, easy, and economic. A clean and well-planned chassis layout means auxiliary equipment can be fitted without unnecessary loss of cost.

• Optimum handling

The high centre of gravity suspension, incorporating progressive acting parabolic springs with shock absorbers and heavy duty stabiliser increases safety in handling and cornering. MAN's optional air suspension offers the ultimate in vehicle and load comfort.

• Flexible

A choice of five wheelbases and minimal cab to body gap enable any body to be fitted, from the shortest 1-pole to the longest box.

• Driver friendly

With open chassis heights as low as 761 mm, the G90 is easy to load and unload. MAN chassis are amongst the lowest available, offering an easier working life for the driver.
